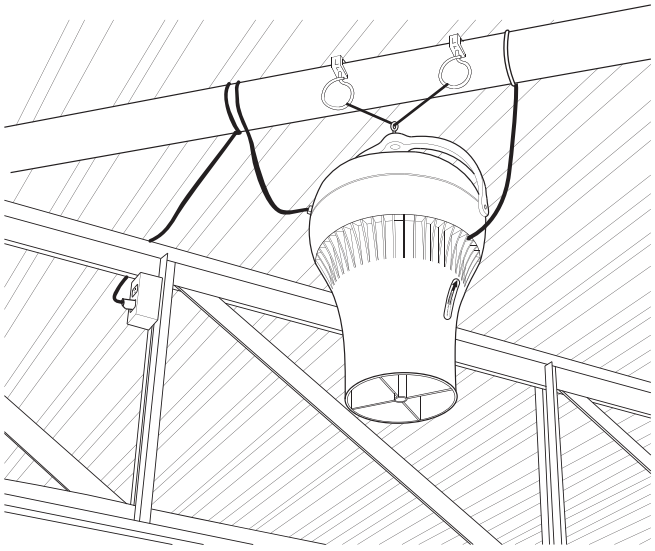
PLACEMENT

PREPARATION

- *Install electrical circuit(s) and outlet(s) in accordance with national and local electric codes*
- *Outlets should generally be mounted vertically unless a "twist/locking" type is being used*
- *Wall switch may be installed in circuit to disable power and prevent electrical hazards when servicing*
- *Confirm electrical continuity of Airius unit on the ground before permanently mounting in the ceiling*

INSTALLATION

- *Hang vertically as high in the ceiling as possible Typically 300mm (12") - 450mm (18") from the roof deck to intake*
- *The Airius unit performs best when air column from the nozzle is unimpeded to the floor*
- *Use professionally installed hardware, capable of supporting a minimum of five times the weight*
- *Hardware to hang the unit includes but is not restricted to: Hooks, chains, cables, carabiners, bridle rings, beam clamps and bolts*
- *Density of the placement is directly related to the effectiveness, performance and savings*
- *Mount out of reach from people and animals*
- *Floor plans, mezzanines, office locations, machinery, people placement, plumbing, lighting, duct work, electrical systems, natural light/air systems, cranes, doors, windows, ventilation and fire suppression systems are all factors in properly locating the Airius system within the ceiling*



OPERATION

- *Designed to operate 24 hours-a-day, 7 days-a-week to maintain thermal equalization/humidity equalization*
- *Use optional speed control to fine tune RPM if needed*

MAINTENANCE

- *Frequency of cleaning will vary by application and environment*
- *You may clean the plastic housing with a damp warm cloth, using mild household detergents*
- *Do not use petroleum products, thinners or solvents to clean any part of the Airius unit*
- *If the Airius unit fails, contact manufacturer*
